### RECOMMENDATION

I have know professor R.G. STRUZAK for more than ten years because of our professional collaboration in the field of electromagnetic compatibility (EMC) and radiocommunications. When I had the pleasure to get acquainted with him, he headed an EMC group at the Wroclaw Institute of Telecommunication and served as professor at the Wroclaw University. He had a very good reputation which has accompanied him until now. In 1983, as Chairman of the French Committee on ISM, I invited professor STRUZAK to Paris and Tregastel to discuss our problems and to lecture at the EMC Symposium. Later, in 1992, as responsible for EMC in Mobile Radiocommunications, I invited him to Paris. Here, we discussed his interesting works in the field of computer simulation, interference modeling and spectrum management at an informal seminar. All his lectures and discussions with him were very valuable and enthusiastically received by the participating experts. My cooperation with professor STRUZAK was always not only fruitful but also pleasant. Our friendly contacts have developed and allowed me to appreciate also his high human values.

Professor STRUZAK is a well-known authority in science and engineering of electromagnetic compatibility, radiocommunications, and spectrum management. As the author of numerous outstanding publications, he has contributed significantly to improve the understanding. Characterizing, predicting and preventing radio interference and electromagnetic pollution. He has been promoting EMC symposia in several countries and was the first organizer of an international EMC symposium in Europe. Many prize awards testify his achievements. The international appreciation of his work was evidenced by numerous invitation to deliver lectures and lecture courses around the world, and also by his election to various responsible functions such as Chairman and V-Chairman of expert groups in the CCIR and URSI. In 1985 he was selected to serve as Senior Counselor-Head of Technical Department in the CCIR headquarters. Here, he has played a significant role, among others, in preparations for WARC'92 which was a focal point for the future of mobile communications in the World.

In conclusion, I do not hesitate to strongly recommend Professor STRUZAK, his scientific background and his pratical experience can be a great asset in a university, industrial research and development, or consulting environment, in the areas of his speciality.
