RYSZARD G. STRUZAK

To whom it may concern:

I have known Professor Struzak and his professional work since 1974. During this period he has served as Vice Chairman of CCIR Study Group 1 conducting internationally based technical studies in spectrum utilization and monitoring.

During his active CCIR service, Professor Struzak himself has led several specialized studies in spectrum utilization, recently, for example, studies of protection of telecommunication services from radiation of industrial, scientific and medical equipment.

Professor Struzak is a highly competent, broadly based scientist and engineer, especially well-known in the field of electromagnetic compatibility. He is author of many scientific publications, including a number of considerable importance to radio communication planning. He has been the prime mover and organizer of a series of successful international meetings on electromagnetic compatibility, and enjoys considerable respect among the International Radio Scientific Union.

In CCIR, he has proved himself an effective leader of group technical studies, achieving excellent relations among the participants, and often preparing the basic documentation for consideration by the group. He is clearly academically competent, but shows excellent practical knowledge and experience in radio engineering.

Professor Struzak is a man of integrity and excellent personal character. I would not hesitate to recommend him for responsible academic, engineering, or international responsibilities.

Richard C. Kirby
Director, CCIR
