RYSZARD G. STRUZAK

To whom it may concern:

I have known Professor Struzak professionally since 1974, and as a colleague in the International Telecommunication Union, International Radio Consultative Committee (CCIR) since 1985.

Until joining ITU he was Professor in the University and Institute for Telecommunications, Warsaw. I already knew his international reputation for research and technical contributions to electromagnetic spectrum utilization and compatibility. He also had outstanding practical knowledge and experience in radiocommunications. He served as Vice Chairman of CCIR's Study Group 1, responsible for international studies of radio frequency compatibility and management. He was prime mover and organizer of a series of successful international scientific conferences on electromagnetic compatibility.

In ITU/CCIR, he has served for more than seven years under my general supervision as Senior Counsellor and Department Head in the CCIR Specialized Secretariat. He has supervised overall the secretariat work in spectrum management and utilization, radio wave propagation, radio noise, and radio science services, as space research, radio astronomy and standard frequency and time. He has been an effective group leader, while remaining exceptionally productive in research and publication, especially in mathematical analysis of complex radio spectrum problems. He is personally responsible for the CCIR Study Group on urgent questions in inter-service frequency sharing and compatibility. In addition, he coordinated on my request some major activities, such as CCIR preparations for the World Administrative Radio Conference, 1992.

Professor Struzak is not only competent, motivated and productive professionally. He is a person of integrity and excellent character. I would not hesitate to recommend him for high responsibility in academic, engineering, or international responsibilities.

Richard C. Kirby
Director
